

Dear Parents of Grades 4 – 9 Students,

In an effort to continue what we initiated during the last few years in regard to technology integration in classrooms for the purpose of providing new and innovative ways in teaching and learning, our main focus is improving students' learning and enriching the educational environment. Throughout the experience of technology integration at Dhahran Ahliyya Schools which has been derived from multiple meetings, studies and extensive research, we worked to integrate every useful resource into our educational system.

In order to prepare for the next academic year 2019/2020, we would like to inform you that students are required to bring laptops that are compatible with our educational system and plan. Laptops must include the features listed below. Dhahran Ahliyya Schools allow the opportunity to provide modern devices for Elementary students. These devices were chosen carefully to match the educational requirements and they include all the software needed.

Note: The devices and their prices will be available by the beginning of the next academic year. Parents will also have the choice to purchase the required software from the school at an affordable price for DAS students only. You may visit the following links to purchase them from external resources.

Requirements and Prices List:
